Open for Business

Uncover what's possible with your Copilot+ PC

Welcome to your Copilot+ PC

Congratulations! You're about to discover a new class of devices designed for built-in AI acceleration, all-day performance, and enterprise-grade security.

What to expect

This guide is designed to help you get value from your Copilot+ PC from day one. Inside, you'll find:
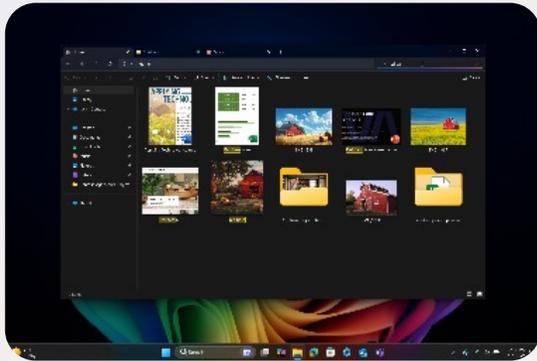

- **Top features** to try today that show you the **power of AI** on your Copilot+ PC.

- Quick **role-based examples** of how colleagues are already using their devices.

- Links to **resources** and **support** so you always know where to go next.
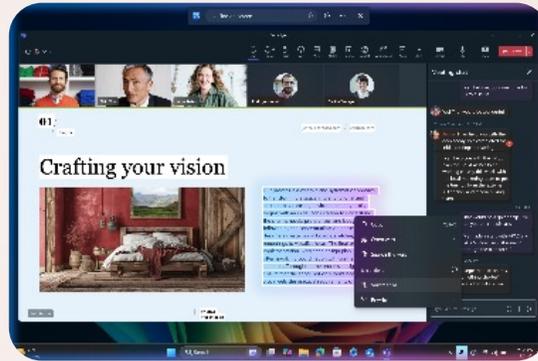

Things to try at your first power-on

These features are built into your Copilot+ PC. No need to download, install, and run a setup wizard. You can also learn more and see step-by-step breakdowns on our **Copilot+ PC Hub >**.

Improved Windows search[1]

To start using Improved Windows search use the search bar in File Explorer, taskbar, or **[Windows Key + S]** shortcut. In your own words, describe the file—whether it's an image, text, or something else—and get relevant results even if the name doesn't match.
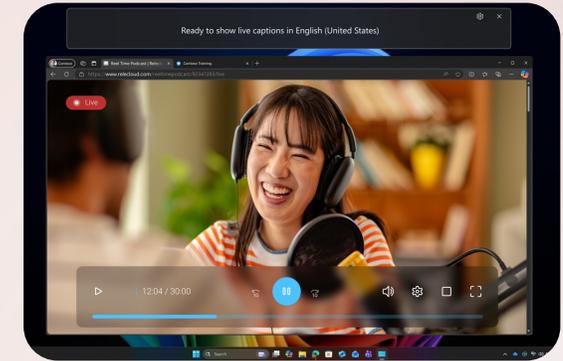

Learn more >

Click to Do[2]

To use Click to Do, use **[Windows Key + click]** anywhere on your screen to highlight text or even images. Highlight an email address to set up a meeting directly in Teams. Select text to open in a new Word document to begin editing. You can even copy images, blur background, or run a visual search with Bing on images.

Learn more >

Live Captions[3] with translation

Enable Live Captions through your Windows Accessibility settings or use the shortcut **[Windows Key + Ctrl + L]**. Once they're on, you'll get real-time translations from over 40 languages into English, over 25 languages into simplified Chinese, or into your preferred language by enabling the Translation option. You can use it in Teams or other web conferencing tools. It also works with pre-recorded content and is available even if you're offline.

Things to try at your first power-on

These features are built into your Copilot+ PC. No need to download, install, and run a setup wizard. You can also learn more and see step-by-step breakdowns on our **Copilot+ PC Hub >**.

Windows Studio Effects[4]

Select the volume icon on your taskbar or use the Actions Center **[Windows Key + A]** shortcut and open Windows Studio Effects. From there, you can access your connected camera and adjust settings to look your best during video calls and recordings. Choose from creative filters, lighting adjustment, standard or portrait blur, auto eye contact, or automatic framing.

Learn more >

Recall (preview)[5]

To open Recall, click the Recall icon in your taskbar or use the **[Windows Key + J]** shortcut. To search for something, just type a description of how you remember it in the search bar. You might say, "presentation with arrows" or "sustainability plans". Once you've found what you're looking for in your timeline, Recall let's you open the file directly from the text or visual matches it found.

Learn more >

Agent in Settings[6]

Access your device Settings window using the Start button, from your taskbar, or by using the **[Windows Key + I]** shortcut. At the top of the window, you'll see Agent in Settings in the form of a "Find a setting" search bar. Describe what you want to do in your own words, such as "Can I make my screen brighter?" or "My mouse is too fast" and Agent in Settings will recommend the right changes.
